DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Filiol et al(US 6,515,553).

The reference by Filiol et al disclose a PLL circuit, see figure 2, with an analog modulation signal input(output of 48), and a digital modulation signal input(via 56), comprising the two-point modulation.

A summation point(46) is shown coupled to the input of the VCO, and a feedback path is shown with divider(freq. Divider). A trimming device(including scaling(30)) is shown, see figure 1, with an evaluation means(42) and controller/DAC for modulating the analog modulation signal(via 48). The charge pump is inherent in the loop(after PFD see figure 3 and 4) and the LPF is connected down stream of the PFD and charge pump.In col. 6, the error

sensor compares the output of the PFD(error signal) with a reference value both during and after modulation and calibration modes. That is, as noted in col. 7, lines 20-55, the synthesizer is set to the center frequency(PLL locked) and then the modulation signals are impressed and the error voltages are compared before the impression and after the impression of the modulation signals.(see col. 8, lines 17-49). The method steps being inherent.
